

of Understanding have been developed through which the EPA will be notified of proposed commitments by federal agencies to projects which could contaminate the Broad Brook Basin of the Barnes Aquifer. The EPA will evaluate such projects, and where necessary, conduct an in-depth review, including soliciting public comments when appropriate. Should the Regional Administrator determine that a project may contaminate the aquifer through its recharge zone so as to create a significant hazard to public health, no commitment for federal financial assistance may be entered into for that project. However, a commitment for federal financial assistance may, if authorized under another provision of law, be entered into to plan or design the project to ensure that it will not contaminate the aquifer. Included in the review of any federal financially assisted projects will be the coordination with state and local agencies and the project's developers. Their comments will be given full consideration and the EPA's review will attempt to complement and support state and local ground water protection measures. Although the project review process cannot be delegated, the EPA will rely to the maximum extent possible on any existing or future state and/or local control measures to protect the quality of ground water in the Broad Brook Basin Project Review Area.
